

Northern

Light bulb
info and guide

Choose the right bulb!

This light bulb guide includes information and advice for choosing the correct light source for your Northern lamp. It is based on functional and aesthetic properties of the bulb in accordance to the lamp design such as shape, size and light colour temperature as well as more technical aspects regarding light quality and power, dimming, life-time and accessibility. Choose the right bulb — create the right mood! For more information please contact us at post@northern.no

Some words about light

Watt (W)

Watt is the measuring unit of energy consumption, but it does not tell how much light the bulb produces. A 100W regular incandescent bulb gives more or less the same amount of light as a 11W LED bulb, but the energy consumption is different.

Lumen (lm)

Lumen is the measuring unit of the total amount of light given from the light bulb in all directions. It does not imply anything about energy consumption.

Candela (cd)

Candela is the measuring unit of the amount of light given from the light bulb in a specific direction. Only spot bulbs with reflectors or directed LED bulbs use this unit.

Kelvin (K)

The light colour is measured in Kelvin. A standard LED bulb usually has a colour temperature of 2700 Kelvin (warm colour). See chart below for a graphic overview.

Socket types

We only use four different standard socket types in our lamps. This makes it easy to find the right replacement bulb.

Northern light bulb guide 2024

	PRODUCT NAME	SOCKET	LIGHT SOURCE - TYPE	LIGHT SOURCE - NAME	PRODUCER	WATTAGE	LUMEN (lm)/ CANDELA (cd)	KELVIN	DIMMABLE	SIZE (DIAMETER x LENGTH)	ENERGY CLASS
	Acorn pendant	E27	LED	Filament top mirror - 4713753	Airam	7.0W	680 lm	2700 K	Yes	60 x 104 mm.	F
	Acorn floor	E27 (x3)	LED	Classic A60 Step dim - 9410716	Airam	7.0W	806 lm	2700 K	Yes (step)	60 x 104 mm.	F
